

Odessa

# Odessa Urban Block: Research & Analysis

## Odessa

(Ukrainian: Одеса; Russian: Одесса; to be referred to as Odessa along the official language policy) is the fourth largest city in Ukraine.

Population: 1,029,000 (2001 Ukrainian Census), 1,012,500 (est. 2004).

The city is a major seaport on the Black Sea, the largest port in Ukraine.

Foundation: 2nd September 1794

City Density: 6,141/km<sup>2</sup> (15,905.1/sq mi)

City Area: 163 km<sup>2</sup> (62.9 sq mi)

Elevation: 40 m (131 ft)

(source: <http://en.wikipedia.org/wiki/Odessa>)

Odessa is and has always been a very important harbour city on the Black Sea coast.

Most of the trade activities between what is today the Ukraine and the rest of Europe, predominately the Mediterranean regions, has gone through Odessa or the nearby Krim region.

That made the City of Odessa a rich and important place for traders and all the working men in the factories, the harbour and the warehouses.

The Ukraine imported wine, oil, glass, ceramics, etc. and exported wheat, raw (building) materials, timber, slaves, etc. via the Marmara Sea to the rest of Europe.

These prospering trade relations lasted until approximately 1870, when the constructions for the 'Orient Express' railway line has been completed.

The new east-west-connection (Europe-Anatolia) brought the north-to-south trade to a fall and Russia was stricken so hard, that it declared war on the Osman Empire (today's Turkey).

some courtyards inside these blocks

Odessa's Main Railway Station

Potemkin Stairs, as they appear nowadays

Panteleimonovsky Church

Pushkinskaya Street

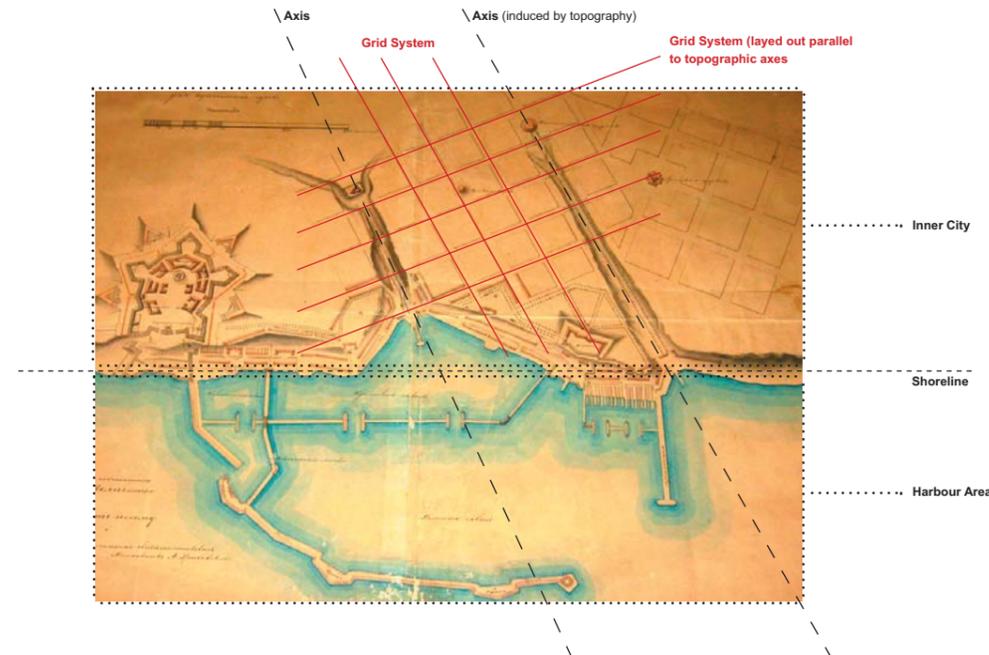

The public open spaces in Odessa are very wide and the Boulevards are seamed with shady trees.

That makes it very comfortable for a pedestrian to stroll around the city without having to worry so much about traffic our overcrowded places, like in many other cities.

But there is a problem with parking and the car traffic, wich gets worse from year to year, like in most other metropolitan areas in the world.

And there also seem to be only insufficient public transport, which also make the people use their cars instead of tramway or bus.

The blocks are very helpful for orientation in the city, a visitor who recognises the axes -the main streets- between the blocks will probably never get lost. That makes it easy to reach any destination in a very short amount of time.

### Aims/Topics:

1. Enhance social Interchange
2. Creating new hierarchies of spaces
3. Enforce the differences between public and private

### Measures:

1. Analysing old connections, creating new ones
2. New (i.e. changed) courtyards and rooftop spaces
3. Removing from courtyards and concentrating of vehicles
4. Zoning: public - semipublic - semiprivate - private

### Definitions:

- public:** Streets, Places, Squares, Pavement, Pedestrian Zone, Parks
- semipublic:** Shops, Restaurants, Shopping Malls, Institutions, Municipality Buildings
- semiprivate:** Courtyards, Staircases, Pergola, most Outdoor Facilities
- private:** Apartments, Gardens, Balkonies, private Rooms

some courtyards inside these blocks

today's functions, shown floorwise (right: single floors extracted)

**functions today:**

- living
- shopping
- working
- relaxing

**(additional) functions tomorrow:**

- rooftop galleries
- a restaurant or/and café at the courtyard
- private rooftop gardens
- a rooftop swimming pool
- an open air cinema

**topics and aims:**

- more light, less density
- additional green, more shade
- creating intern 'magnets' (attractions)
- creating new individual spaces
- enhance communication in the community
- introduce new functions on different levels

**Vision - Idea - Konzept:**

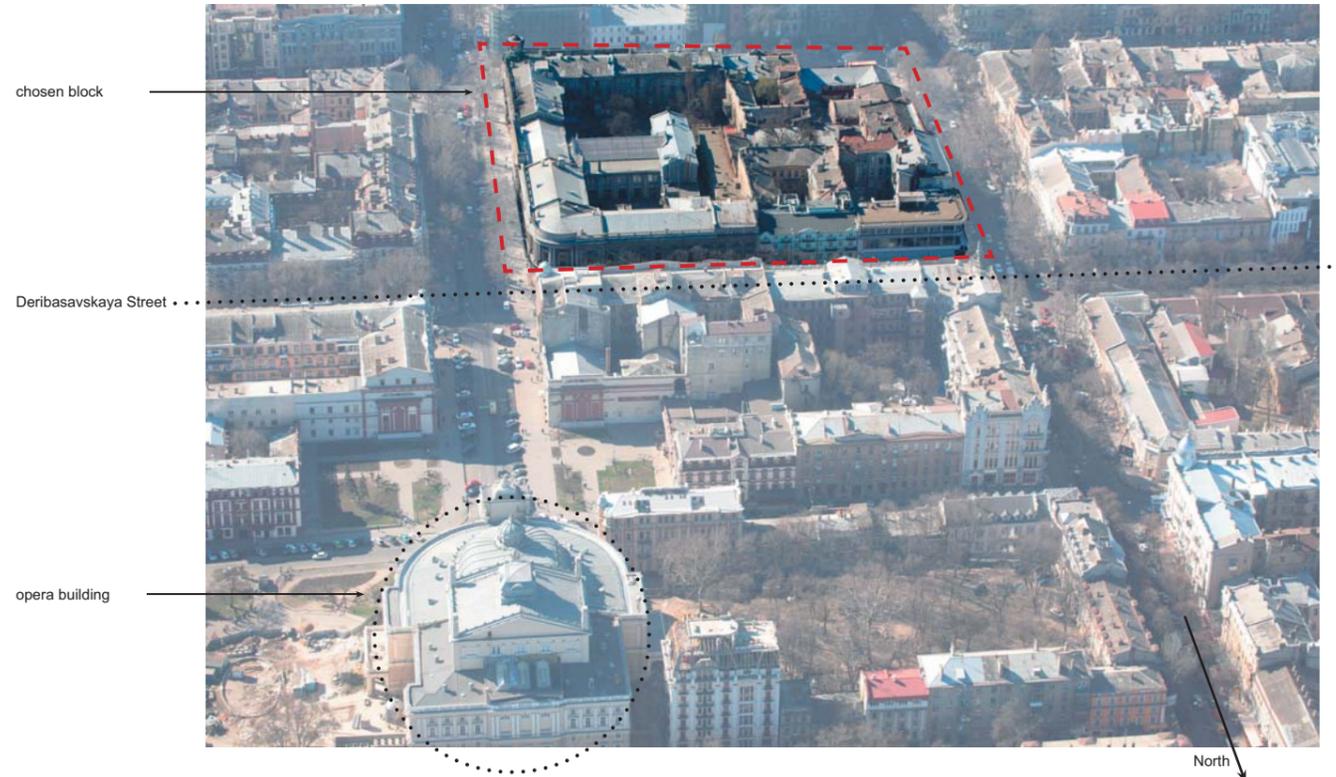

Our impression -when we were in Odessa in May 2007- was, that these blocks in the inner city are in danger of getting very heterogenic, because there is no rules and konzept to organise the public spaces inside the blocks.

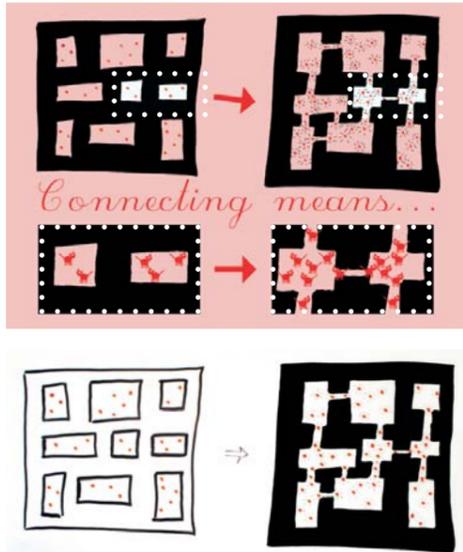

Everybody who wants to builds something (garages, barns, house extensions, etc.) does it. That's what makes the buildt environment chaotic and difficult to use.

The problem is, that the line between public and private is blurred and if someone reclaims some public space and builds something, that space is lost for the others (his neighbours, the community, etc.).

So the courtyards are getting less and less attractive and are used mostly for parking and as a place to store building materials.

Our intention is to reorganise the open spaces and give them new and decent functions, to be used by everyone.

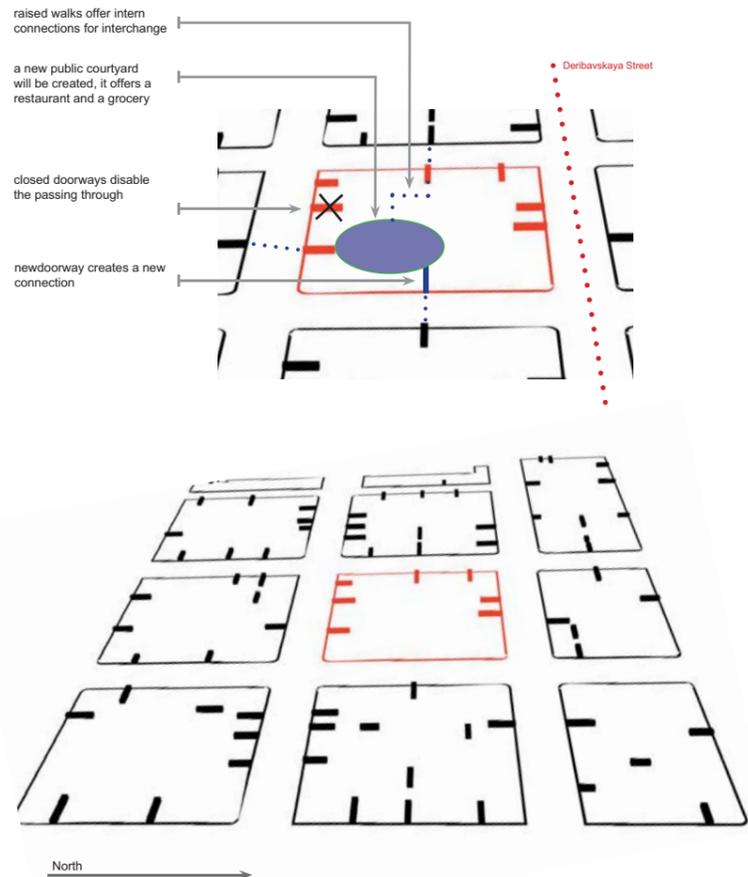

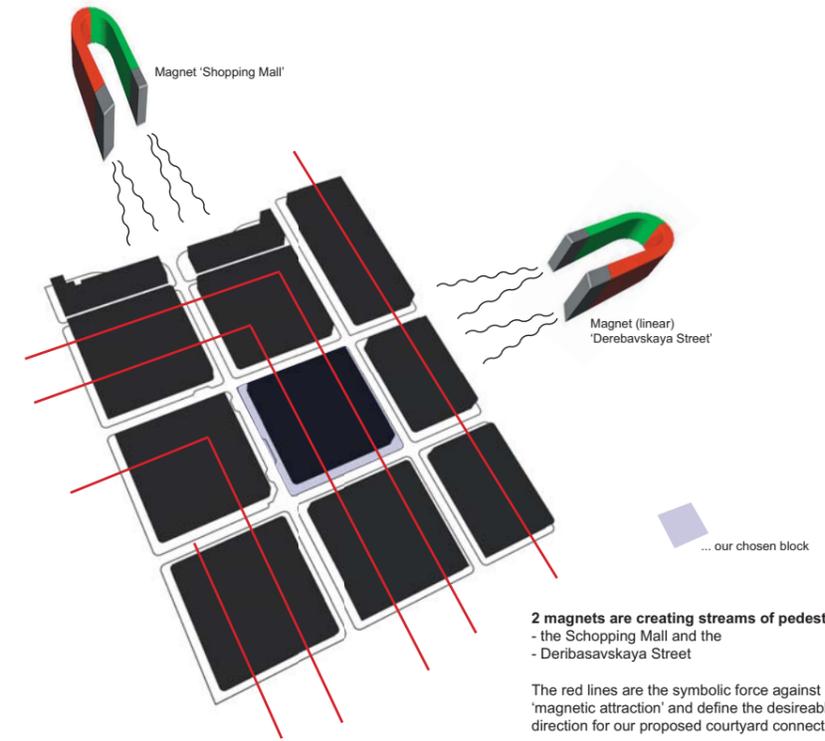

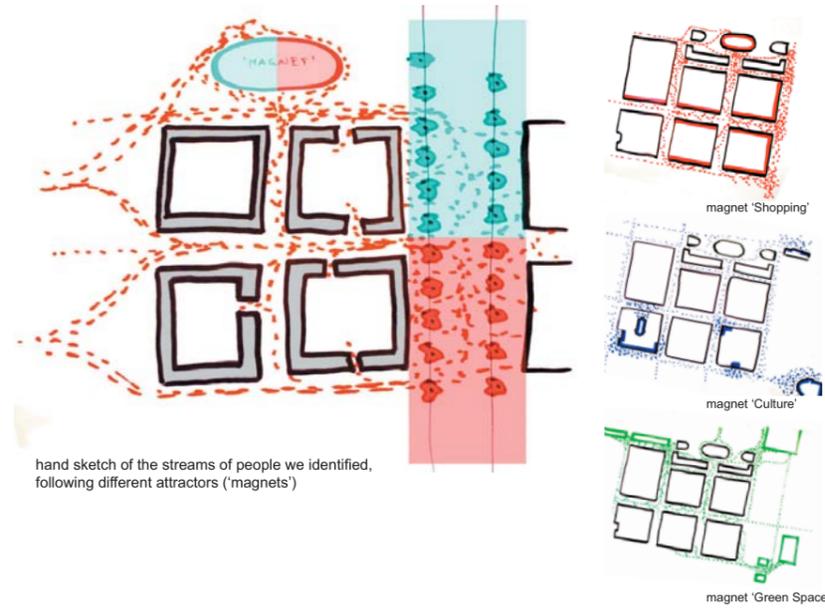

The connection between existing, but still separated spaces & courtyards.

Nowadays all courtyards are reached independently by the people who live and work there. There is no real connection or any obvious social interchange ('community').

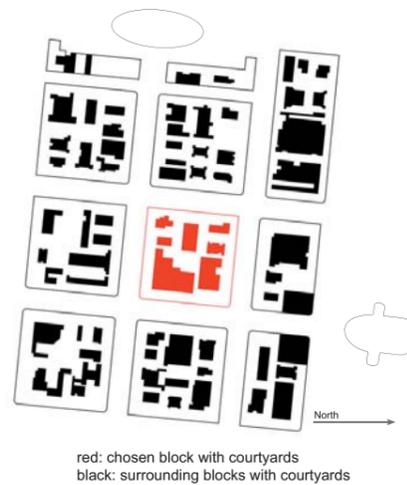

We are going to minimise that manko by creating distinctive connections and enhance the 'social flow' through the block (offering public facilities, building recreation areas, etc.).

The eastern side of our chosen block has -which is somehow remarkable- no connection to the public space outside. That offers us the possibility to place an opening there.

We are going to place that opening opposite the opening on the other side of the road to create a new connection between these two blocks. That new connection is orthogonal to the attraction line of the 'magnets' we identified earlier, so that there is no danger for that courtyard to be used as a shortcut.

Further we are going to close the middle pathway on the southern side of our block for pedestrians and plan to put a parking space in this location. That means we are going to raise the courtyard to the second floor, which has also the advantage of providing more light to it.

intern magnet:  
public open spaces (ground),  
recreation zones, etc.

intern magnet:  
covered parking lot,  
raised courtyard

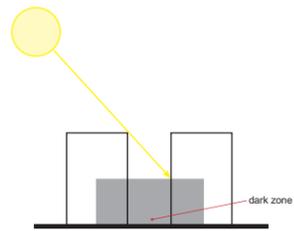

intern magnet:  
gallery, atelier, workshop, etc.

intern magnet:  
semipublic rooftop area,  
swimming pool, bar, etc.

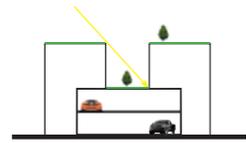

intern magnet:  
public open spaces (roof),  
recreation zones, parties, etc.

intern magnet (private):  
private/shared rooftop, garden,  
community space, playground,  
recreation, picnic area, etc.

intern magnet (private):  
more private/shared courtyard,  
community space, playground, etc.

very badly lit courtyard

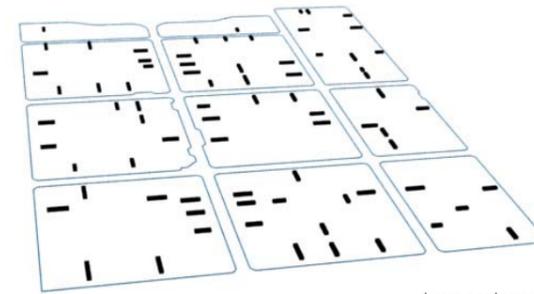

raising of the courtyard offers more light and creates a building to park inside

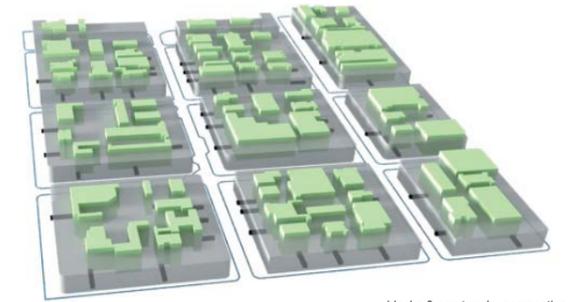

**aim:**  
in all the other courtyards the cars can be removed, now it's possible to use the courtyards again (for relaxing, communication, etc.), cars are protected of theft and vandalism;

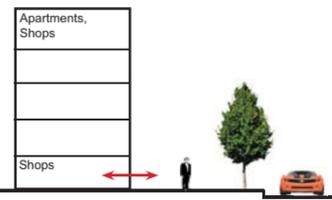

connections (doorways) extracted

doorways and pavement edges

blocks & courtyards, perspective view

Shopping Walk at the Deribavskaja Steet

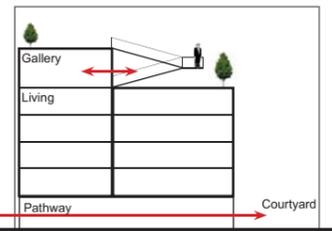

The most important aspect of block structures is the intern layout of ways and the different connections.

Courtyards are mostly calm, sometimes shady and giving the people there the feeling of being 'in' (a room or space).

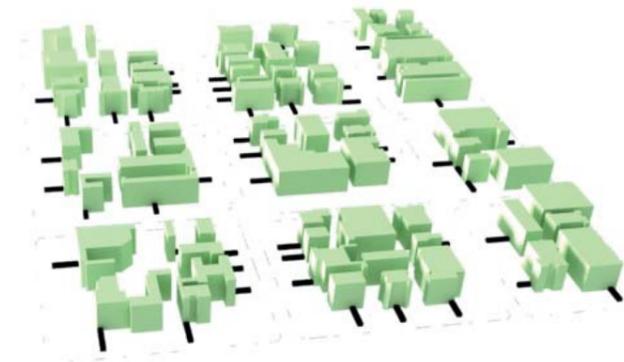

That fact creates privacy, because most people slow down their walking pace and look for a second around.

That's why we wanted to emphasise these values of the open spaces and create new hierarchies

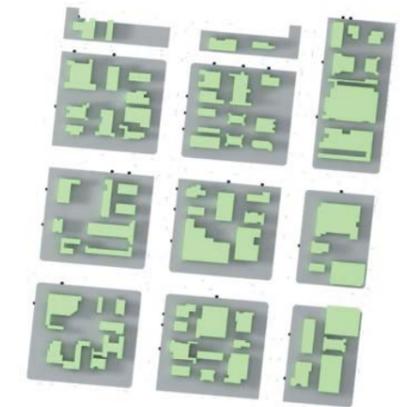

This means we are going to make some courtyards more private, and others more public, and there is our idea to use the rooftop areas for relaxing, communicating, gardening, etc..

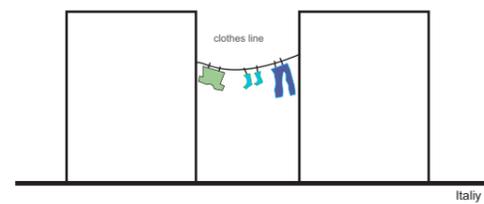

rooftop areas are reachable from inside (via staircases) or from the outside (ramps, stairs, etc.)

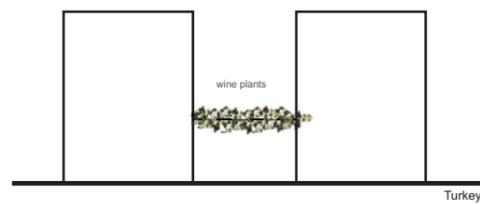

connections (doorways) & courtyards (green: air, 'empty' space)
